TYPE 1 OR TYPE 2

- ▶ Type 1 hard hats are made from lightweight, hi impact rated ABS. This hard hat is suited to most everyday applications that are not heat related
- ▶ Type 1 is most common hard hat for construction and general head protection from impacts
- ▶ Type 2 hard hats are made from hi impact rated polycarbonate. This hard hat is suited to high heat applications like smelters and foundry works
- ▶ Type 2 hard hats should be worn where there is a risk of exposure to high heat and fire

STANDARDS & CERTIFICATION

Force360 recognise the weakness and potential liability claims that may arise from hard hats that are sold in Australia under compliance claims only. Force360 source the entire range of hard hats from a single manufacturing partner to ensure consistency and reliability of product. Most importantly a further step is employed that sees SAI Global periodically audit and certify both the manufacturing process and the products. All of Force360's hard hats are certified to AS/NZS 1801. This standard in part ensures shock absorption, resistance to penetration, stiffness of the shell and electrical resistance are all within specified parameters. For **Certified Australian Standard** protection, only wear head protection with the Red Tick Tower.
